Perspectives on Managing Grazing Country

Perspectives on Managing Grazing Country

Graziers talk about successfully managing their country

EXAMPLE ONLY

(Due in 2006)

Various Authors (2006)

These four booklets feature the views of experienced and successful north Australian graziers on how to manage their country. Each booklet covers one of four regions: the Northern Gulf and Cape River regions from Queensland, the Sturt Plateau Region from the NT and the Victoria River region near the Northern Territory / Western Australian border.

Each booklet includes the views of graziers on managing pastures, weeds, fire, soil erosion, pest animals, special natural features, plants and animals. There are also sections on monitoring and planning and evaluation.

An Evaluation of 250m MODIS Satellite Data for Monitoring the Condition of Tropical Savanna Rangelands. VRD

Kate Richardson 2006

This report from the Tropical Savannas CRC by Kate Richardson of NT DNRETA finds that MODIS satellite data is able to detect differences in rangeland condition. Changes or variation in cover levels, thus condition, are most apparent towards the end of the dry season when vegetation cover is senescent. 26 pages.

Reports on carrying capacity of Tropical Savanna pastoral lands

Reports on carrying capacity

of tropical savanna pastoral lands

EXAMPLE ONLY

(Due in 2007)

Various Authors (due 2007)

These guides use the best available data to provide carrying capacity figures for major land systems in the Desert Uplands region of Qld and for the Victoria River, Sturt Plateau and Barkly districts of the NT. They include practical "how to" manuals for land managers.
